SKIDREAMS
 Engineered by Webdreams
www.skidreams.es

- Analyze and study your customer's data both at the lifts and points of sale.
- 100% integrated with skidata 370 access control & ticketing systems, freemotion. Logic and flexible ticketing systems
- Your data will always be available at your reach on real time.

Your data always available at your reach on real time.

Reporting system **WD.Reporting** allows you to get powerful and complex reports from your customers behaviour at your resort's lifts in a very straight and easy way, allowing you to group the data by Skipass type, customer type, validity type, and many self-made dimensions for studying the whole data from above or in depth.

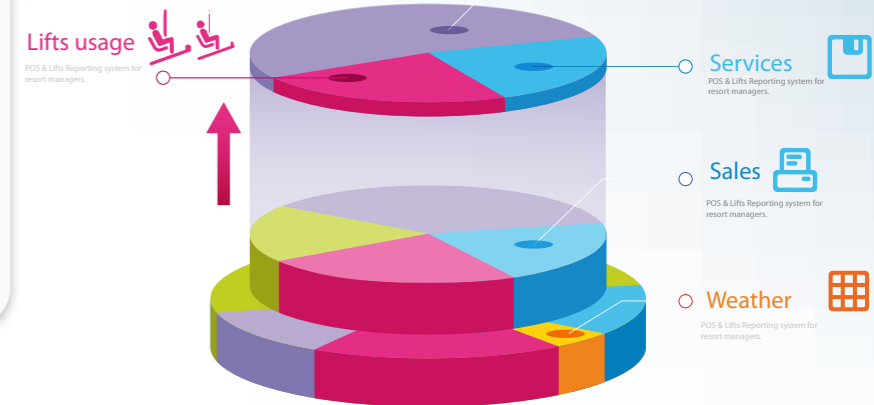

Control your sales, turnover and production in a easy way.

WD.Reporting helps you in making daily reports about cash desks, types of sold skipasses, daily, weekly, monthly resumes... and also comparing between time periods instantaneously.

WD.Reporting modules & Features:

- 1 RIDES**
Analyzes data from the access control system, from the usage of the resort's lifts.
- 2 SALES**
Data from the ticketing sales system of the resort, integrated with SKIDATA 370 Cash Desks and SKIDATA FLEXIBLE Systems.
- 3 PRODUCTION**
Match between the rides and the sales, for each single ride happened in the resort, its matching sale will be found and the real price retrieved. Gets a real view about how much from the turnover at the cashdesks is being delivered at the lifts.
- 4 GRAPHICS**
Allows to create representative graphics on a easy and simple way, being possible to compare between data groups, seasons, acumulated data etc.

Installation & start up are quick and straight as well as the user training to achieve the maximum benefit from the system in short term.

Easiness

Easy and intuitive to handle

Powerful

Get in second complex reports involving whole seasons

Independence

All the data is at your reach without waiting for receiving complex reports or historical resumes.

Flexibility

Straight filters to make the data even more accurate. Global functions for calculating maximums, minimums, averages...

Visual

Detailed Graphics to easily show seasons comparisons or any other data group.(lifts, skipasses)

Production

Match between the rides and the sales to input the exact price to each customers day, week, month...

ADDITIONAL FUNCTIONALITIES
